## THE WORLD'S FISH: GROWING DEMAND, SHRINKING SUPPLY

Between 2006 and 2011, the global demand for fish protein grew by 16.5 million tons, but the amount of fish caught fell by 1.3 million tons. Without intervention, this disparity is likely to get a lot worse as the world's population continues to grow and the demand for fish protein is projected to rise by 20% by the year 2030.

That's why Bloomberg Philanthropies is partnering with Oceana, Rare and EKO Asset Management to work in key areas around the world to help restore fish populations and meet the dietary needs of a growing global population.

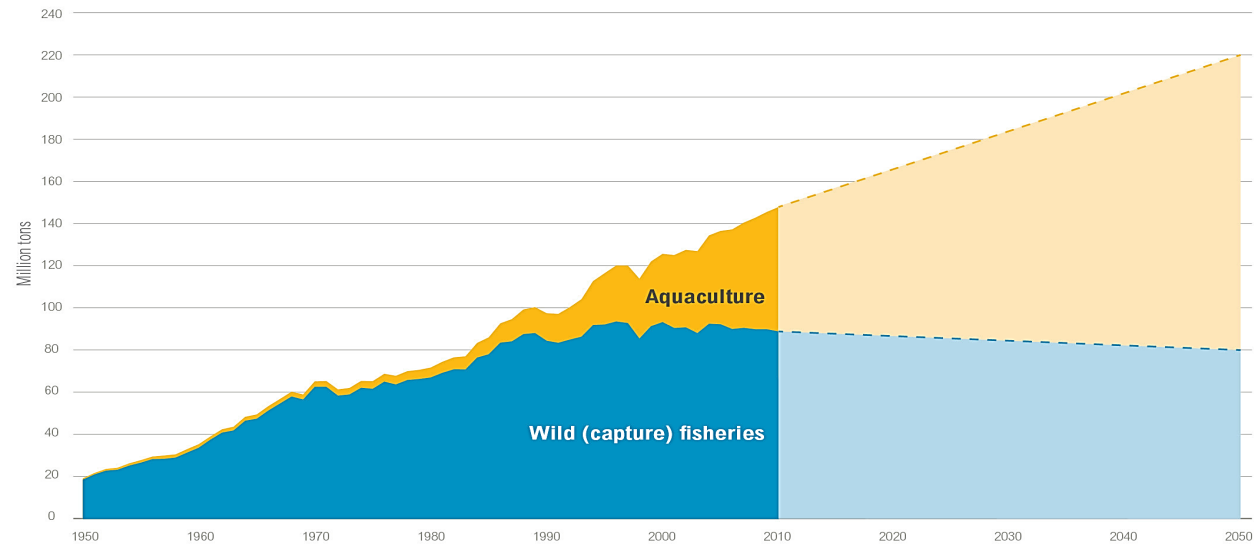

**IT'S UP TO US**  
By implementing important reforms, we can make industrial and local fishing more sustainable, and protect this essential food supply for future generations.

## Aquaculture Is Expanding to Meet World Fish Demand

Source: Historical data 1950–2010: FAO. 2014. "FishStatJ." Rome: FAO. Projections 2011–2050: Calculated at WRI, assumes 10 percent reduction in wild fish catch between 2010 and 2050, and linear growth of aquaculture production at an additional 2 million tons per year between 2010 and 2050.

# Fish freshness and food safety

## Sensory testing

Professionals;  
strong subjectivity

Detection and Assessment:

Rapid

Nondestructive

Low cost

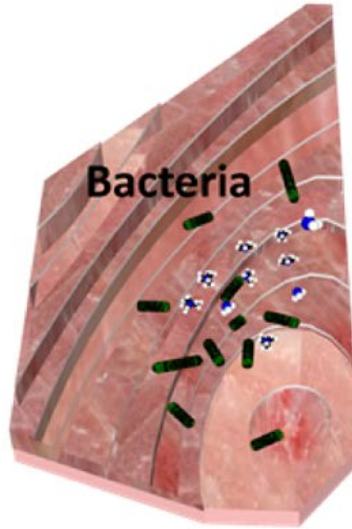

## Physical and chemical analysis

High cost;  
Difficult to operate;  
Poor qualitative ability;  
Frequent maintenance

Traditional methods (Destructive testing)

# Indicators: Released gases from spoiled fish

low working temperature  
low detection limit  
good selectivity

Gas sensors

Diversity  
Complexity  
Low concentration

Features

**Reduced flavor**  
**Food safety risks**

## Conclusions

1. A series of gas sensors based on metal oxides for detecting the released gases ( $\text{H}_2\text{S}$  and  $\text{NH}_3$ ) during fish spoilage process were developed.
2.  $\text{WO}_3\text{-Bi}_2\text{WO}_6$  microflowers based gas sensor showed good sensing properties to ppb-level  $\text{H}_2\text{S}$ .
3.  $\text{Ce-TiO}_2$  nanocrystals showed good sensing properties to low-concentration  $\text{NH}_3$ .
4. The practical application potential of as-fabricated gas sensors was verified by detecting fish spoilage.
