Performative language in Bertolt Brecht's *Life of Galileo*. Didactic reflections on dialogue and interpretation

Interroger la performativité dans *La vie de Galilée* de Bertolt Brecht. Réflexions didactiques sur les articulations entre l'interprétation et le dialogue

1. Dualism vs. Complementarity
The concepts of “interculturality” and “transculturality” have led to extensive literary and communication research in the past two decades. Since then, the abundance of publications dealing with both concepts has been impressive, despite some tentative attempts in the last ten years to demarcate them and give some preference to the second tenet. An example of a work that clearly stands under the sign of interculturality is the volume edited by Wilfried Floeck, published after an international colloquium on contemporary theatre in Germany and France (Floeck, 1989). It may seem artificial to pin down German and French theatre to distinct characteristics, yet the intercultural perspective is derived precisely from the assumption and perception of two distinct theatrical traditions as enduring entities. The intercultural perspective does not describe theatre in the process of becoming, but about adopting a comparative, sometimes evaluative attitude, which is articulated, for example, in the statement that the German theatre system should be considered as exemplary within Europe (Floeck, 1989: X).

A completely different perspective is taken by Günther Heeg, whose book *Das transkulturelle Theatre* (Heeg, 2017) has received comparatively little attention despite its ground-breaking originality. Interculturality has been replaced by a radical commitment to transculturality. According to Heeg, 21st century thinking is characterised by complementarity rather than binarism. Thus, life does not no longer present itself as an “either or”, as assumed since René Descartes; there is no “German theatre” on one side and “French theatre” on the other, as still assumed by Floeck, rather both are constantly connected with each other. Instead of highlighting differences, the transcultural perspective consists of asking oneself if there is more to experience than a “cultural collage” of different cultural traditions (Heeg, 2017: 18). This shift in perspective, presupposes a different relationship between theory and experience, as Heeg emphasizes.

So far, so good. However, what does transculturality have to do with the Didactics of Dialogue Interpreting (DI)? Is this a useful concept in TOLC? The objective of this study is primarily to elucidate how the DI approach has gradually shifted toward the realm of

---

1 Transcultural perspectives have also experienced a breakthrough in Interpreting studies. Similar to the field of theatre, “the concept of ‘culture’, on which identity has traditionally been grounded, is being questioned as a meaningless abstraction, detached as it is from reality where symbolic systems are in constant flux and evolve through mutual contaminations” (Merlini and Schäffner, 2020: 9).

2 In this book, 40 authors, including theatre scholars, directors, and playwrights, examine the development of German and French theatre from a comparative perspective. They are interested in the differences that exist between theatre companies in Germany and France as well as in the relationship between authors and directors, which also reveals, according to the relevant articles, astonishing differences between the two countries.

3 The abbreviation TOLC (which stands for Translation for Other Learning Contexts) implies that translation can have a didactic value for training courses that have some relation to translation but are not dedicated to the goal of training translators.
theatre over the past decade; indeed, a growing number of theoretical texts advocate for a radical shift towards role-playing as a pedagogical medium of choice for DI. The second segment focuses on a concrete didactic contribution grounded in a theatrical text, specifically a scene from Bertolt Brecht’s *Life of Galilei*. Overall, this journey into the world of theatre was consciously designed as an experiment: The aim here is not to convince students pursuing a Bachelor of Art or Theatre Studies about the merits of this art form, but to introduce TOLC or DI students to a medium that can boast of being highly developed in terms of “interaction”. The “experiment” was conducted at the Heidelberg “Institute for Interpreting and Translating”, where I had the opportunity to teach on several occasions. It is linguistically oriented toward a German-speaking learning audience with English as a second language.

2. Turning towards theatre
When reviewing the relevant literature on DI didactics, it becomes apparent that the nonverbal perspective is being increasingly emphasised. More specifically, there seems to be a consensus that the notion of “interaction” is the very starting point for addressing the methodological challenges of Interpreting Studies (Pöchhacker, 2015; Bendazzoli and Monacelli, 2016: XIV; Cirillo and Niemants, 2017). Similarly, the contributions curated by Laura Gavioli and Cecilia Wadensjö (2023) assert that interaction is a dynamic phenomenon, thereby introducing novel notions in educational settings that align with this presumption. Nonetheless, I am not inclined to overlook the paradox that despite the consensus that role-playing, the theatrical medium par excellence, is a highly effective means of teaching students dialogic thinking, there are only a handful of authors who associate role-playing with theatre as a performative genre or consider whether theatre can contribute to a holistic approach to DI.

Since the end of the 1990s, the identification of professional competencies that teachers of interpreting should bring with them has been a subject of pedagogical-psychological and didactic research (Kautz, 2000). What characteristics make a good teacher of interpreting, what attitudes one should possess towards teaching and learning, and whether didactic knowledge transcends subject knowledge are increasingly significant and have gained prominence in the relevant literature (Petrova, 2022). Since the entry into force of Directive 2010/64/EU on the right to interpretation and translation in criminal proceedings, a call for a stronger contouring of the professional habitus of a Public Service Interpreter has been raised. Nonetheless, there remains a deficiency in the competencies that must be acquired during training. Therefore, the postulate of vocational education that is practice-oriented and conducive to reflection, as advocated by Şebnem Bahadir in relation to interpretation training in German-speaking countries, can be extended to the entirety of Europe:

---

4. The feasibility of this concept was tested in an interpretation seminar I carried out at the University of Heidelberg.
5. The teaching module can also be transferred to other language combinations with a few appropriate modifications.

7. Cf. the entire third part of the book, dedicated to training and professionalisation.

8. That such a holistic perspective overlaps with the so-called embodiment pedagogy (Nguyen and Larson, 2015) is beyond question. Nevertheless, the theoretical angle to be taken here is a theatre-scientific one, since the aim is to lead role-play out of its niche existence and to give theatre the space it deserves as a genre.
Mira Kadrić, like Bahadir, also believes that the role of the university in the field of DI is not limited to providing students only with subject-specific knowledge (Kadrić, 2011: 11). She employs diverse methodologies from diverse fields, such as the *Theatre of the Oppressed*, which was pioneered by Augusto Boal. The Brazilian director and theatre theorist addressed political indifference towards social issues\(^9\) (BOAL, 1995). His theatrical practices centred on the correlations between physical postures and inner dispositions. Kadrić draws inspiration from Boal’s exercises (BOAL, 2002) and employs them in a scenic manner to teach DI. Thus, she writes:

> Die Beispiele sind Dolmetschübungen entnommen, die authentische Situationen nachstellen, und stammen damit aus einer Faktensammlung; gleichzeitig stellen die Beispiele den Versuch dar, subjektive Erfahrungen zu reflektieren und Zusammenhänge mit den theoretischen Ansätzen aufzuzeigen und zu interpretieren. Auch Lernen ist nicht nur ein rationaler, sondern zugleich ein emotionaler Vorgang (Kadrić, 2011: 95).\(^{11}\)

Despite the assertions made in this article that role-play ought to encompass not only a pragmatic but also a poetic approach, it is undeniable that it is a technique of significant didactic value due to its closeness to reality and its capacity to adapt to intricate human dynamics. In the relevant literature, it has been implicitly assumed that role-playing is necessary (Crezée, 2015; Krystallidou *et al.*, 2017); it appears that there is a consensus that role-plays do not accurately represent real-life experiences, but that they offer the advantage of presenting specific scenarios (Dahnberg, 2023) and focusing on specific aspects of the intricate reality, allowing for the experimentation of previously unfamiliar behaviours in a relatively secure environment. Simultaneously, role-playing is a delicate technique that requires specific prerequisites and consideration of some basic rules during its execution. Letizia Cirillo and Maura Radizioni rightly emphasise that role-playing, particularly in the realm of “business negotiations”, requires careful consideration. They suggest that the achievement of learning objectives calls for meticulous execution of each step of the activity, including defining the objectives, preparing the materials, briefing the participants, carrying out the activity, and debriefing afterwards (Cirillo and Radizioni, 2017: 120).

---

\(^9\) Translation: The more professional way of dealing with such a situation of need is to take the path of practice-oriented critical education and training, which not only focuses on the promotion of rational skills, but also includes the awareness of the body and emotionalism, that is non-verbal and verbal communication competence and empathy building (Bahadir, 2008: 177. The translation was realised by the author of this article).

\(^{10}\) Throughout his life, BOAL pursued with what had become his mantra: to let as many people as possible participate in cultural and social matters.

\(^{11}\) Translation: Examples are taken from interpreting exercises that recreate authentic situations and thus come from a collection of facts; at the same time, the examples represent the attempt to reflect on subjective experiences and to point out and interpret connections with theoretical approaches (Kadrić, 2011: 95. The translation was realised by the author of this article).
However, it is important to remember that role-playing is an activity that does not necessarily require physical action; these can also be imaginary or narrative and do not necessarily have to occur in the oral mode. While there is a consensus that role-playing in a well-prepared setting is the best way to introduce students to DI, I worry that role-plays, particularly those simulating conversation or conflict, may not be as authentic as they pretend. Practising empathy, persuasiveness, adaptability, conflict resolution, and other interpreting skills may not always be possible in simulated sales, staff meetings, or customer complaints. Theatrical elements play a crucial role in helping students understand the logic behind the effectiveness of dialogical interactions, emphasising their resemblance to DI.

3. Why Brecht?
The idea of replacing Boal with Brecht may seem puzzling at first. After all, their connection lies predominantly in the realm of the “social” and little else. However, while both advocate for a shift in prevailing conditions, they also diverge significantly. Unlike Boal, Brecht was not only a theatre director and theorist, but also a poet and playwright affiliated with the modernist literary movement. The idea of using a scene from Brecht’s Life of Galileo in DI classes owes much to Günther Heeg’s book mentioned above, which, compared to the discussion of postdramatic theatre triggered by Hans-Thies Lehmann in the 1990s (Lehmann, 2005 [1995]), has caused relatively few waves. Contrary to Lehmann’s concept, transcultural theatre goes beyond the boundaries of a particular genre or completely novel form of theatre. Instead, it introduces a ground-breaking perspective within theatre studies, delving into diverse theatrical practices and shedding new light on various historical forms and techniques. It embraces a modern outlook, heavily influenced by current events, as described by Heeg:

According to Heeg, one representative or (better yet) founder of practices promoting transcultural theatre was Bertolt Brecht (1898-1956); the influential German playwright

---

12 I recently had a good experience with a collection of role-plays that were designed for mediation training, but were easily transferable to DI (Zurmühl, 2014).

13 Translation: News that reaches us every day testifies to its urgency. The mass flight of people from war, hunger and poverty over land and sea, burning refugee shelters, and xenophobia. Just as it is bad, these events are reactions to them. In many places, the response to Europe and the world’s comodule’s greatest challenge to date is the policy of isolation and newly erected border fences and walls. [...] The contradiction between the necessity and possibility of setting a world in motion on the path of transcultural world-making and the desire to master the movement through a general return to the unshakable tectonics of fundamentalist orders and traditions can no longer be overlooked (Heeg, 2017: 23. The translation was realised by the author of this article).
saw the strangeness of theatre as a potential source of its renovation. His famous term “Verfremdungseffekt” (which is also sometimes rendered as “estrangement effect”) understands “alienation” as an alienation from experience itself. He was convinced that the audience and actors should become strangers to themselves; in this way, hidden connections beyond the everyday, superficial view of reality would become visible. Replacing gawking with critical seeing, under this basic premise, Brecht wanted to turn the theatre of illusion from head to toe. This alienation enables the spectator to adopt the peculiar attitude which characterises the natural scientist, as Brecht explains in his theatre writing *Kleines Organon* using the figure of Galileo:

> Damit all dies viele Gegebene ihm als ebenso Zweifelhaftes erscheinen könnte, müßte er jenen fremden Blick entwickeln, mit dem der große Galilei einen ins Pendeln gekommenen Kronleuchter betrachtete. Den verwunderten diese Schwingungen, als hätte er sie so nicht erwartet und verstünde es nicht von ihnen, wodurch er dann auf die Gesetzmäßigkeiten kam (Brecht, 1957: 151-152).

Recipients of Brecht’s work should develop the ability to observe human behaviour and social circumstances from a unique perspective. This “strange gaze” allows for seeing through established norms and eventually gaining control over them. For Brecht, alienation means understanding everything in such a way that there is a possibility of intervening. It is this perspective that seems to me to be interesting for dialogue interpreting, since the aim is to train students in a way that they understand the social relevance of their work, the ethical dimension of the interpreting activity they carry out, which inscribes itself to social change, no matter how small.

The teaching module explained in the following section presents a different approach compared to that of Bahadir and Kadrić. It does not rely on exercises originally designed for aspiring actors and is then adapted for dialogue interpreters. Instead, students are immersed in an alienating experience (in a Brechtian sense), where a theatre text, such as the one presented here, perpetuates the dialogical principle in countless variations. The audio version of the text is an invaluable training aid as it vividly illustrates the fundamental principle of every literary text: language as a dynamic and interrelated phenomenon. It exemplifies Brecht’s dramatic aesthetic, emphasising the inseparable link between the power of language and the impact of gestures.

### 4. Bertolt Brechts *Life of Galilei*

Brecht’s *Life of Galilei*, set in Renaissance Italy and written before, during, and after the Second World War, explores the timeless ethical dilemma surrounding knowledge. The author continually refined his play, resulting in three surviving versions spanning 1936 to 1956, each situated within a dynamic historical context. However, in this teaching module, the focus is not on the connection between the first atomic bomb and the Galileo Galilei. Instead, the main character of the play serves as an opportunity for students to contemplate their capacity for action. Ethical reflection on professional action and the integration of one’s professional role into one’s personal identity are indispensable

---

14 **Translation:** For the self-evident to appear to him as equally doubtful, he would have to develop a strange gaze with which the great Galileo looked at a chandelier that had begun to swing. He was astonished by these oscillations, as if he had not expected them and understood nothing about them, which then led him to the laws (Brecht, 1957: 151-152. The translation was realised by the author of this article).
components of dialogue interpreter training. These fundamental objectives must be integrated into a comprehensive curriculum that has yet to be established. As outlined in the following lesson plan, the workshop encompasses two distinct teaching phases:

<table>
<thead>
<tr>
<th>TARGET GROUP</th>
<th>Students of dialogue interpreting (First- and second-level Master degrees) with a mother tongue knowledge of German and a good to very good knowledge of English</th>
</tr>
</thead>
<tbody>
<tr>
<td>TIME REQUIRED</td>
<td>3 double lessons</td>

<td>FINAL DISCUSSION To what extent can the alienating view be helpful for dialogue interpreting?</td>
</tr>
</tbody>
</table>

**FIRST TEACHING PHASE**

The teaching module I conducted as part of a seminar on DI within the framework of an exchange program at the University of Heidelberg began with a discussion of a creative writing agreement that students had to complete at home; they were asked to examine Galileo’s curriculum vitae and write a petition for pardon in a language marked by submissiveness. The written format of the exercise closely mirrors face-to-face interaction, capturing an interactional phenomenon in its literal sense. As in any interaction, the author must adjust the predetermined statement consistently throughout the writing process. The exercise was a challenge, especially for a generation, whose tone, rather known for its directness, seeks to avoid any semblance of flummery. My students were familiar with Brown/Levinson (1987) politeness theory and the related concept of face-threatening acts. They were acquainted with the idea that, in the

15 For more information on the similarities between face-to-face interaction and the letter form, see Andreas Franzmann (Franzmann and Rychner, 2023: 151-179).
coexistence of people, certain linguistic actions can hurt the image of the person being addressed, so that politeness strategies must be used to mitigate the effect of these actions. In the writing task below, difficulty was increased by the power gap, in which any threat to the positive face could lead to consequences for the writer’s physical integrity and life. The learning objectives associated with the exercise were as follows:

Students will understand that
- language can contribute to the domination of some people by others;
- within power-impotence constellations, language can open up limited spaces of freedom;
- politeness strategies may be a question of survival;
- any misplaced words can lead to significant consequences.

**WRITING TASK**

In 1616, an Inquisitorial commission declared heliocentrism to be “foolish and absurd”. On 26 February, Galileo Galilei (1564-1641) is ordered by Cardinal Bellarmin “to abandon completely the opinion that the sun stands still at the centre of the world and the Earth moves, and henceforth not to hold, teach, or defend it in any way whatever, either orally or in writing” (Pearson, 2020: 175).

*Put yourself in Galileo’s situation and imagine that he were to write a petition for pardon to Pope Paul V. in a submissive language. What is the wording of his request?*

*Notice: Before writing your letter in English, read the websites below. On the last website you can even find the signature of the famous astronomer.*

*The Valediction or “How to end a letter”.* (2021, April). parks@uh.edu. Retrieved April 23, 2023, from https://www.bauer.uh.edu/parks/genealogy/parks_washington_letters.htm#gal [Here you will find Galileo’s signature.]

Here is what I consider to be a particularly well-written letter, penned by one of my students:
Florence, 02 February 1616

Highly honored Pontifex maximus,

To take up the pen to write to You, Your Holiness, is something I would not dare to do under normal circumstances. But times like these, when issues that were thought to be long settled are being raised anew, call for unprecedented courses of action. I am sure Your Holiness will be gracious enough to forgive my impertinence. Recently, His Eminence, Roberto Francesco Romolo Bellarmino, whom I hold in infinite esteem and who assists You as Cardinal and Counsellor in Your difficult office with his infinitely wise and intelligent views, sent me a dispatch signed by Your holy hand, urging me to abjure the heliocentric conception of the world. Without in any way wishing to overstrain your exceedingly great capacity for compassion, let me, most Serene Holiness, speak to you of the despair that took hold of me when I became aware that the text of the dispatch had come from your holy pen.

If I were standing before You in person, I wouldn’t dare to kiss the hem of your dress. But a letter – the much more indirect form of conversation – allows me, without violating the precepts of courtesy, to explain to you with all necessary modesty what heliocentrism consists of.

My scientific efforts, the many investigations, and proofs I have carried out with your gracious support, have brought me to the evidence that the heliocentric view is indeed the correct one. It took me an infinite amount of time and effort to discover, using the latest scientific methods, that the Sun is the resting center of the Universe. The planets, including Earth, move around the center, while the fixed stars are attached to a resting outer ball shell. The Earth revolves around itself once a day and the Moon revolves around the Earth about once a month. All these are scientific facts that can be refuted by no one and by nothing, not even by Holy Scripture. By which I do not wish to have said that the Scriptures could err. Nothing is further from me. The Scriptures cannot err, but their interpreters can. It is time – if I may speak so freely – for theologians to reconcile the statements of the Bible with the heliocentric view of the world. Only through this common effort of will, can man succeed in subduing the earth.

It is because I am so committed to this common effort of will – and because I dare to hope for your great understanding for the cause of science – that I place my fervent hope in you reversing the prohibition imposed on me and allowing me to teach and research in adherence to the heliocentric world view.

Humilus et Oboedens Servus

Galileo Galilei

The discussion revolved around the question of how much space there is for individual ethical reasoning in a social system that primarily relies on a systematic framework for morality. In the letter above, Galileo passionately defended his views, even though they were deemed heretical at the beginning of the seventeenth century. He firmly believes that his views are true and worth advocating for. However, he dresses his convictions in suggestive formulations that border embarrassment, at least in today’s perception. In the penultimate paragraph, he eventually develops a conscious attitude of his own in which he calls on the pope to cooperate more. He suggests that theologians and scholars should work hand in hand – a bold idea, since the 17th century was strongly influenced by the power of the Church, which claimed to be the institution holding truth. “Ingratiation is like cotton wool into which the truth is lulled”, was the laconic comment of one of my students. “And if the truth is packed in too much cotton wool, it suffocates in it”, another replied. A
very pertinent metaphor, as I found, which sums up the whole of Brown and Levinson’s theory of politeness.

In the last paragraph of Galileo’s letter, he does not adopt the submissive posture that characterizes the opening of the letter. Instead, he maintains a polite but not overly ingratiating tone, offering a glimmer of hope that the Church may eventually acknowledge the limitations of its claim to truth and work more closely with science. The students noted that the letter’s closing resembled a sermon, and this observation is particularly intriguing because it highlights the performative power of language. On a conceptual level, it becomes clear that religion and science should complement one another and collaborate for the betterment of humanity. At a linguistic level, this idea is conveyed through the scientist’s use of a sermon-like form of address. The scientist’s goal, or ideal, is fulfilled through the medium of language.

b. Second teaching phase
Consisting of two different types of texts, the second teaching phase is reserved for the examination of a specific theatre text, namely the 14th scene from Brecht’s Life of Galileo (Brecht, 2021 [1955/1956]). The learning objectives associated with the exercises in the second teaching phase were as follows:

Students will understand that
- the open performativity of a sentence is determined by its syntactic position;
- performative sentences serve to make a stronger speech act than a simple assertion;
- a simple scene statement can contain a strong, foreshadowing symbolic power;
- moral judgements are not necessarily made explicitly;
- language and ethics are closely intertwined;
- it is important to focus on the expressive dimension of actions;
- the prosody of spoken text can have gestural characters.

i. Discussion of the first scene direction
Having written the petition for pardon to the pope, the students are now sufficiently prepared to understand the final scene of Brecht’s play, which, as the first scene direction suggests, takes place in a country house near Florence. Thus, this first scene direction is an introduction to the second phase of the teaching module. It is projected onto the wall without any further commentary, which triggers reactions from the students after a few minutes of stunned silence. Here, the wording of the scene direction:

Sechzehnhundertdreunddreißig bis sechzehnhundertzweundvierzig
Galileo ist ein Gefangener der Kirche bis zu seinem Tode (Brecht, 2021 [1955/1956]: 117).16

Unlike what is claimed in Kerry White’s theatre lexicon (White, 1995: 179), scene directions are to be considered an integral part of the theatre text. More precisely,

16 Translation: Sixteen hundred thirty-three to sixteen hundred forty-two Galileo Galilei remains a prisoner of the Church until his death (Brecht, 2007: 59. The translation was realised by Wolfgang Sauerlander and Ralf Manheim).
instructions that precede a scene are not a product of coincidence, and so one can only agree with Hans Lösener's stance that a scene begins before it starts (Lösener, 2017: 46). All the events on stage are prepared by events that precede them in time. In the preceding scene, Galileo recanted his revolutionary beliefs, making the scene statement seem like an immediate reaction to his revocation. Both events, the revocation and the fact that Galileo is now a direct prisoner of the Church, are directly related.

The significance of the highlighted scene directions in this play is undeniable, particularly given that it is titled "Life of Galileo", which implies certain expectations, especially given that it features a renowned figure. The 14th scene's title, which specifies the location of the action as a country house near Florence, adds to the intrigue of the previous scene, which took place in the palace of the Florentine envoy in Rome. The contrast between the two phrases “Prisoner of the Inquisition” and “Prisoner of the Church” further enhances the local definition:

```
Leben des Galilei

Sechzehnhundertdreunddreißig bis sechzehnhundertzweundvierzig
Galileo ist ein Gefangener der Kirche bis zu seinem Tode
```

The expectations of a book that pretends to contain a life story automatically focus on the particularities of that story and on the trace that remains of a particular life. The fact that the title of the 14th scene emphasises that Galileo is now a prisoner of the Inquisition reduces his life to this period; it is as if Galileo’s whole life consisted of this period from 1633 to 1642. The phrase “until his death” precedes “prisoner” in the title, while the same phrase follows “prisoner” in the scene direction, as if the language wanted to make it performatively clear that there is no escape for Galileo from this situation. He can neither go forward nor back; he remains a prisoner; however, he may behave. It is not only the Church that keeps him captive, so does language, which surrounds him with insurmountable walls.

The repetition of the expression “until his death” (which seems even more solemn in the second version because of the appended “e” in the word “Tode”) also has an associative effect in addition to its framing function: it establishes a relationship with the phrase “Until death do you part”, which probably goes back to the 16th century, but is also traceable in the Protestant Church since the end of the 19th century. The expression implies that Galileo, despite his own beliefs, submitted himself to an ideological system “until death do us part”, the “Church system”, to which he bowed almost beyond recognition. This becomes performatively visible in the framing of his life testament, the Discorsi, which are restricted by inverted commas. Brecht, by using various titles, seems to be passing judgement on Galileo’s actions. In this scene, Galileo asks Andrei to smuggle

---

17 As can be seen from the Lesson plan, the students have read the entire play in German, i.e., in their mother tongue, at the beginning of the second teaching phase.

18 It is interesting to notice here that Monks or nuns who take a vow of eternity ("eternal profession") also promise to serve God “until death do us part”.

10
his Discorsi to Holland, rather than openly declaring his convictions. A vivid demonstration is given here that “theatre” creates an empirical and psychological reality by depicting the systematic phenomena of natural language.

ii. Galilei’s monologue

That the dialogical principle is not only inherent to dialogue but also to monologues, that monologues do not require counter-speech in order to be dialogical per se, will be shown in the following. In a typical dramatic monologue, a person speaks to a counterpart who may be present or absent and who is singular or plural. In Brecht’s monologues, the audience is systematically included as plural counterparts. Brecht wanted to prevent precisely that stage magic in which the actor – forgetting the audience – seems to become identical with his role. He did not want to hide the theatre in the theatre, but to exhibit it, so his writing is gestural, in which the posture of the figure is demonstrated.

The famous Galileo monologue of the 14th scene may be taken as an excellent example. It is addressed in the same way the former pupil Andrei, as to the performance audience. The definition of science developed therein is impressive because of its stringency. The question of the benefits of science to humanity brings together a wide range of issues, such as the need for self-criticism and constant questioning. Galilei’s diagnosis is especially true when science is in danger of submitting to “opinions” rather than “facts”. The question of the meaning of science in the face of human ethical matters stands and falls henceforth with the people who are prepared to “stand up for reason”. The students immediately noticed that the Galileo presented in the monologue was different from the one in their letters, insofar as a thoroughly submissive tone had given way here to a self-critical one.

Only recently has linguistic research begun to focus on studying prosodic-phonetic features in theatrical interactions (Barth-Weingarten and Szczepak Reed, 2014). One reason for this late interest in the prosodic design of theatre texts is that the transcription of productions is time-consuming and requires frequent listening to the passages to be transcribed. From a didactic perspective, it also appears to make little sense because of the amount of work involved. The transcription method presented here, which makes no claim to completeness, concentrates primarily on pitch movement, a fundamental characteristic of theatrical prosody. Other parameters such as pauses/sentence breaks and stress are subordinate to pitch movements. The hierarchy of the parameters is presented in the following homework assignment:

Brecht: Leben des Galilei, 14th scene, Group work

Prepare a rough transcript of Scene 14 in the Schiffbauerdam production (https://www.youtube.com/watch?v=e3tK_xf7aB8, 2:56:09) by marking conspicuous passages in the text relating to the character’s manner of speaking and narration. Refer to the following inventory of symbols for this:

- Pitch movement [< > rising high, < . > falling low, < − > constant, < || > slightly rising, < − > slightly falling low].
- Pauses/sentence breaks [<-> short pause, <-> medium pause, <-> longer pause].

19 One of the students commented that “Galileo drowned out his convictions with cotton wool”, thus reviving the metaphor of the previous lesson.

20 The version used here is based on the line version of a production that was staged at the “Berliner Ensemble Theatre Schiffbauerdam” from 1978 (CLC, 2022).

---

21 The symbol inventory is strongly based on the Conversation Analytical Transcription System according to Selting (2009: 391-393), which has become widely established as the standard in German-speaking countries and is suitable for the transcription of all Indo-European languages. At this point, I would also like to refer to the excellent Gat-to-Das Online Tutorial zum Transkribieren von Gesprächsdaten, which is divided into four thematic modules and to which I owe some ideas for the conception of the didactic sequence presented here (GAT-T0, w. D.).

22 Translation: GALILEI: In my free hours, of which I have many, I have been going over my case and thinking about how my behaviour must appear in the eyes of the scientific world, to which I no longer belong. It will have to consider whether it can be satisfied with its members delivering to it a certain number of propositions (say about falling bodies or the movements of certain celestial bodies). I have, as mentioned, excluded myself from the mindset of science. However, I assume that – at the risk of atrophy – it will not be able to relieve its members of all further obligations, for example, the obligation of maintaining itself, science as science. Even a wool merchant, apart from buying cheaply and selling expensively, must also be concerned that the trade in wool may proceed unhindered. Consequently, a member of the scientific world cannot point to his possible merits as a researcher if he has failed to defend his profession as such against
In the course of the class discussion, it was observed that pitch movement holds significant weight in the monologue and that the tone of one's voice can reveal more about a speaker's attitudes and intentions than the words themselves, thereby offering a vital insight for future dialogue interpreters. Professional actors are well-versed in this concept and deliberately modify their prosody, treating it as a flexible tool. In the Schiffbauerdamm production, gestural prosody is prevalent in every turn, and this is not a coincidence; as Brecht believed, gestural language serves a performative function.

The notion “gestic” refers to the gestures used by a certain person while speaking; to a certain attitude, which comprises not only the way this person feels or thinks but also the way she speaks. Similarly, the term “gestural” implies demonstrating and commenting on gestures. Prosody serves as a commentary on a character’s attitude. This is evident in the pauses that expand the monologue and subvert it simultaneously. Galileo’s speech is deliberately interrupted unnaturally, highlighting the individual parts of his speech. He analyses both the content and prosody of his own monologue by breaking down language into its components. The following sentence may serve as an example: „Demzufolge kann ein Mitglied der wissenschaftlichen Welt nicht auf seine < ETwaigen Verdienste als Forscher verweisen < ‖ >, wenn er versäumt hat, seinen Beruf als solchen zu verteidigen gegen ALLE GeWALT < ? >. “

Here the “merits” of the researcher are set in pauses, and they will stay in pauses, if the researcher does not at the same time defend his research activity against violence. In other words, a researcher can only refer to his research if he stands up for the freedom of research and does not allow himself to be taken over by any authority. The pauses – the prosodic embrace – symbolise the embrace of authority on a performative level. This eerie embrace is underscored by the heavy stresses placed on the words “ALLE GeWALT” that threaten to overwhelm the rest of the sentence with their prosodic force; the prosodic background literally represents the scale of the terror emanating from the word “GeWALT”. Brecht speaks here quite consciously of a changing and syncopated rhythm. In the type of monologue, we are dealing with here that prosody alienates the content and thus consciously presents it to the viewer.

iii. Final discussion
In our final discussion, we delved into the idea of “alienation effects” and their relevance to DI. We explored the advantages of adopting a transcultural perspective, which enabled us to uncover nuances that might have gone unnoticed otherwise. Brecht's method of portrayal particularly piqued our interest, as he presents events in a manner that elucidates their underlying causes to the viewer. He posits that cultures are not static, but rather constantly evolving; and that it is essential to scrutinize our own customs and practices from an alternative vantage point.

all violence. For science is based on the fact that one must not subject facts to opinions but must subject opinions to facts. It is not in a position to allow these propositions to be restricted and set up for any opinions or for any facts. Science is in the same boat with the whole of humanity, so it cannot say: What is it to me if there is a leak at the other end of the boat? Science cannot use people who fail to stand up for reason. It must chase them away with shame. For it may know as many truths as ever, in a world of lies it would not endure. Had I resisted, natural scientists could have developed something like the Hippocratic Oath of physicians, the vow to use their knowledge solely for the good of humanity. If the hand that feeds it occasionally grabs it by the throat without warning, humanity will have to chop it off. That is the reason why science cannot tolerate a person like me in its ranks (the translation was realised by the author of this article).
We also discussed the importance of gestures and prosody; indeed, it is these that make the language system amazingly effective, and for this reason cannot be separated from the interactional phenomenon whose integral components they are. Theatre demonstrates in a special way that the language system adapts dynamically to the constantly changing requirements of the interactional situation. Walter Benjamin, who was a great admirer of Bert Brecht, emphasises not without reason that Brecht’s genius also lies in the fact that he concentrated on the most primitive elements of theatre and largely dispensed with wide-ranging plots. Epic theatre, according to Benjamin, seeks “to portray situations rather than develop plots” (Benjamin, 2018: 328). We were able to capture two such situations by focusing on two forms of interaction: the Petition of Pardon and Galileo’s monologue. Both forms had an alienating character in the Brechtian sense; we perceived both situations as “real”, not with satisfaction as in a film, but with astonishment. Epic theatre, and this is also the reason why it is so useful for DI teaching, does not reproduce situations; it discovers them together with the spectator, who is thus assigned the role of critical co-thinker.

The petition for pardon highlighted the necessity of engaging in “polite assaults”, as described by Catherine Kerbrat-Orecchoni (2000: 29), in order to mitigate the potential for “life-threatening acts” that could endanger a human being. In the context of theater, linguistic gestures are used to create tension between characters and their surroundings, revealing the speaker's tone and emotions and shedding light on their relationship with the subject matter.

Heeg’s work sheds light on the fact that Brecht renounced the notion of enclosed cultures, which is still characterised by the concept of interculturality. To Brecht, cultures are in motion and detached from their origins and traditions. Displaced from their places of origin, either voluntarily or forced into exile like Galileo, cultures exist only in fragments: as thoughts and reflections, and as pitches or gestures. Brecht consistently strives to portray his own customs and traditions in a foreign light. The purpose of the alienation effect is to view everyday familiar things and situations from an alienated perspective (Heeg, 2018).

The theatre effectively illustrates the immense potential of language to perform. Both theatrical texts and interpreted interactions are complex adaptive systems that are dynamic. Theater teaches us that dialogues, or interpersonal encounters, are not finite in their meaning. The fundamental performative nature of language is the crucial factor, which is why theatrical texts should not be excluded from dialogue interpretation. Interpreters of dialogue have a vested interest in developing a theatrical perspective, as Galileo did when he observed a swinging chandelier. This article aimed to demonstrate that theater is the best means of cultivating this perspective.
