LTUs are the regional building blocks of geology

National Commission for Stratigraphy LithoTectonic Working Group NCS-BE G We need your expertise **Interested? Join us!**

LTUs also never have been formalised

LTUs get formally defined and placed in thesauri that reflect their geological context

The GSEU project builds the LithoTectonic Framework of Europe

Theux Window

Condroz Inliers

Examples of Vinits) With their own historyks regional nappes fault blocks local scale

Stavelot-Venn Massif

Campine Basin

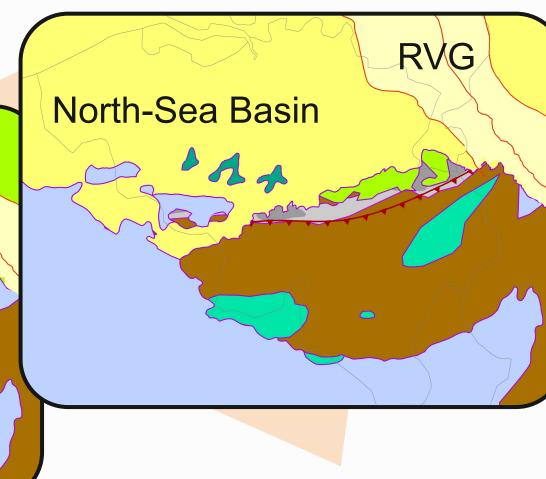

Are all these LTUs?
What is their definition? Try yourself

Borinage Coal Basin

Rhenish Massif

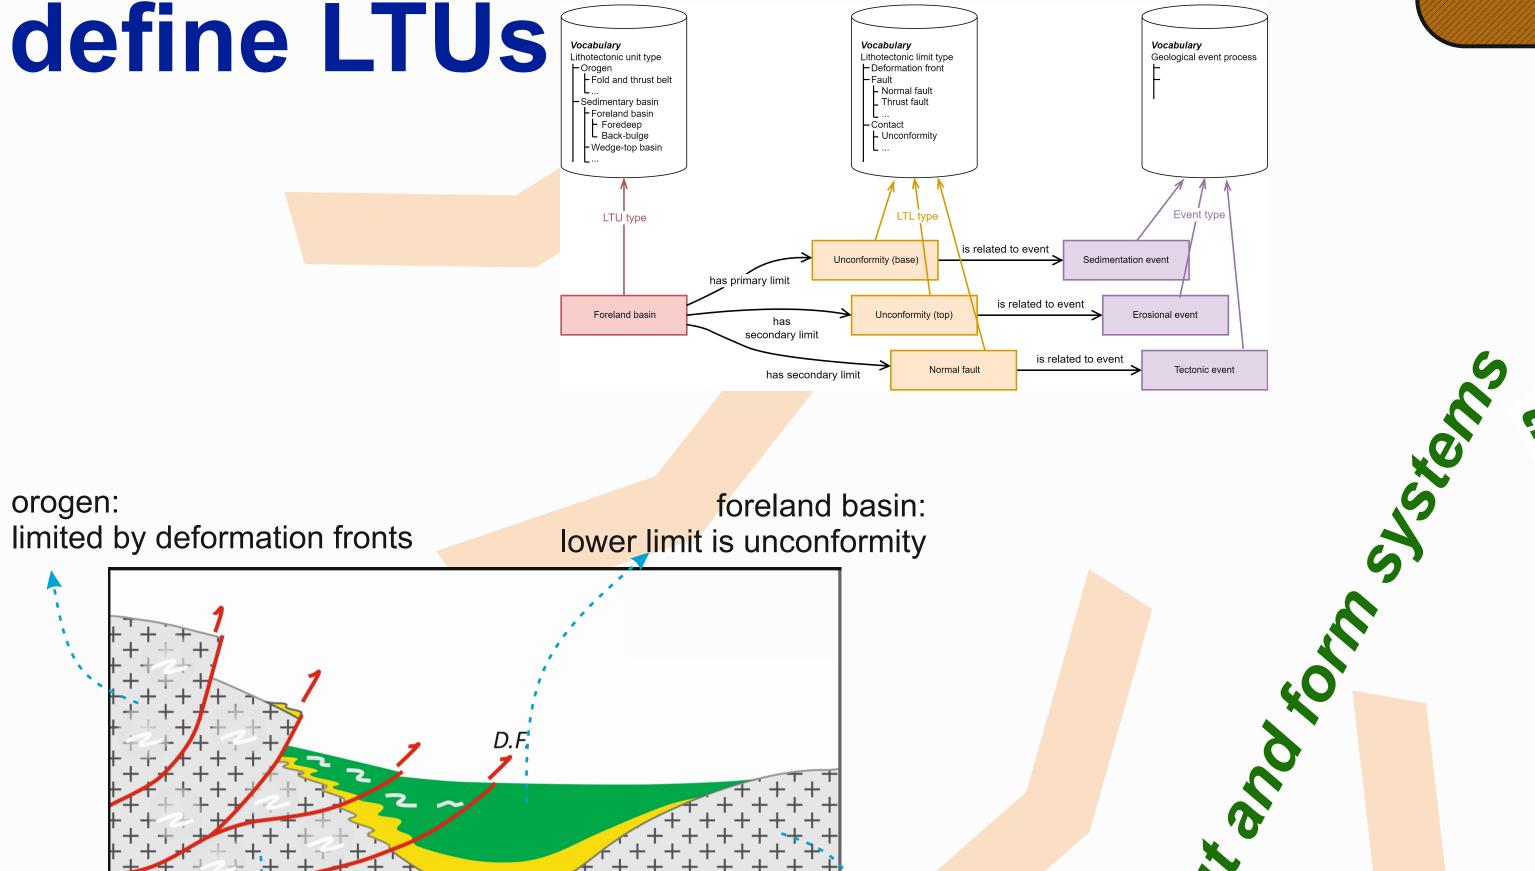

<u>Variscan</u> Foreland Anglo-Basin Brabant Massif Variscan Orogen

RVG Boreal Pericontinental Basin Paris Basin LTUS are easily visualised,

Visualising

LTLs correspond to events that define and limit LTUs LTLS (LithoTectonic Limits)

orogen: foreland basin: limited by deformation fronts lower limit is unconformity nappe: basement: limited by thrusts upper limit is unconformity

Later LTUs eroding and cross-cutting earlier LTUs

easily communicated, easily discussed **Foreland basin** Orogen **Primary final Secondary limits** limit

A Committee of the Comm

How does the Mons Basin fit in regionally? London-Paris Basin System Post-Variscan Basin Supersystem → London-Swabian Basin System Armorican Massif → London-Paris Basin System

→ London Basin → Paris Basin → Normand Basin → Mons Basin → Sologne Basin

→ Brie Basin

Relations between LTUs
